

ELEC 1111 - Electric Circuits Tutorial 1 - Circuit Basics

Never Stand Still

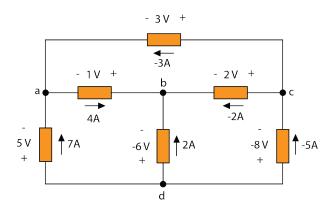

Faculty of Engineering

School of Electrical Engineering and Telecommunications

1. The following figure shows the current (i(t)) through and the voltage (v(t)) across a device.

- 1. Sketch the power p(t) delivered to the device for t > 0.
- 2. Find the total energy E absorbed by the device for the period 0 < t < 4 sec.
- 2. Consider the circuit of the following figure. Based on the provided voltages and currents

- 1. Identify which devices absorb power and which ones generate power.
- 2. Calculate the power generated or absorbed by each device.

3. Calculate the power absorbed by each of the elements in the following figure.
